

HMD-T-TEMP/A

Temperature sensor for HMD-T devices

- + External PT100 air temperature sensor
- + Pt100 sensors are temperature probes which are based upon resistance changing of platinum at temperature influence
- + PTC resistance thermometer
- + An advantage of standardisation of nominal resistance and resistance changing is the compatibility of such sensors without new calibration of measurement chain
- + The interpretation of sensor's resistance is realised by measurement of voltage drop in sensor which is flowed through continuous measurement current
